

## Polyerase QAC

### **DESCRIPTION**

This is being developed exclusively for the weight reduction process of Poly/vis. It helps to save the construction of the fabric and removes the surface beats caused by grey singing and does not allow caustic soda to penetrate in the fabric to damage the core of the fibers.

### **BENEFITS**

- Increases the wetting power of synthetic blends
- Increases the dye-ability
- Increases the colour yield
- Softens the fabric
- Resist the caustic soda to damage the core

### **TYPICAL PROPERTIES**

Consistency	Liquid
Appearance:	Transparent
Ionic Character	Non-ionic
PH:	Neutral

### **APPLICATION**

It is to be applied 10 minutes just before adding caustic soda @ 1 % (w.o.g). I
